Subject: American Cyanamid Company Corrective Action

During a recent site visit to American Cyanamid Company in Hannibal, Missouri I was informed of groundwater contamination at the site. I found a groundwater investigation report which was submitted to Missouri's Water Pollution Control Program as part of a NPDES permit application. This report verified the groundwater contamination.

*Report date
Oct 1996*

American Cyanamid is operating under the provisions of a permit issued in 1990. The corrective action provisions of the permit are contained in the HSWA permit.

Attached is a letter for your signature requesting that Cyanamid follow the provisions in the HSWA permit for submitting a notification of a newly identified SWMU and a SWMU assessment plan.

Due to time concerns related to the issuance of the NPDES permit, it would helpful if you could send this letter out within 30 days.

If you have any questions please give me a call at (573) 751- 3553.

FYI - We may have to look at revising the priority of this site based on this new information.

Thanks.
